

**Key words Index for
Songklanakarin J. Sci. Technol.
Vol.24(Suppl.), 2002 : Membrane Sci. & Tech.**

A

Acetobacter xylinum, 855
alteration of membrane structure, 777
alternating electric field, 799
asymmetric membrane, 815; 879; 1025
autocorrelation, 1045

B

bilayer couple model, 771
bioaffinity, 791
biochemical oxygen demand, 989
biodynamics, 791
BSA, 855

C

CA membrane, 999
cake layer resistance, 947
carbon membrane, 843
carrier saturation, 907
cell membrane, 1045
cellulose acetate, 879
cellulose membrane, 855
characteristic frequency, 785
Chlorella sp., 855
critical flux, 929

D

dead-end stirred cell, 999
defect-free, 1025
detection, 791
3,5-Diaminobenzoic acid, 807
dielectric dispersion, 785
dielectrophoresis, 799
dissolved oxygen, 989

E

elastic constant, 799
electrodeionization (EDI), 955
electroplating, 966
elongation, 799
enhance permeate flux, 947
equilibrium constant, 907

F

facilitated transport, 907
filtration, 855
fluorescence correlation spectroscopy, 1045
fluxes and percentage of rejection, 879
fouling reduction, 929; 947
fractionation, 916

G

gas separation, 815; 833; 843; 1025
gas sparging, 947
guava juice, 941

H

heavy metals, 966
high ionic strength, 785
hollow fiber membrane, 833; 843; 989
hydraulic permeability, 855

I

immunosensors, 791
impedance spectroscopy, 777; 791
interfacial polymerization, 807
ion exchange membrane, 955
ischemia, 777

L

lead-acid battery, 815

M

membrane, 966
membrane diffusion, 1045
membrane flux, 900
membrane formation, 1025
membrane science, 1009
membrane technology, 891
microglia, 771
morphology, 871

N

Nafion[®], 907
nanofiltration, 879; 916; 977; 999
neutrons, 863
nuclear track-etched pore membrane, 863

O

oligosaccharide, 916
oxygen enriched system, 989

P

particle size, 929
performance test, 999
phase inversion, 1025
piperazine, 807
poly (ether-imide), 871
polyacrylonitrile, 843
polysulfone, 815; 833
POME, 891
porous membrane, 871
prebiotic, 916
protein, 977

proton exchange membrane, 823
protoplasts, 799

R

R.O., 999
radiation-grafted membrane, 823
recovery, 977
retentivity, 941

S

shape, 771
shear rate, 833; 879
single cells, 785
sintering temperature, 823

T

Thai research reactor, 863
transmembrane pressure (TMP), 900
TRR-1/M1, 863
tubular structure, 771

U

ultrafiltration (UF), 891; 900; 929; 941
ultrapure water, 955

V

vapor induced phase separation, 871
volatile components, 941
VSEP, 900

W

wastewater reuse, 900
wastewater, 966; 977
water desalination, 879
