

Taxonomic notes on the genus *Premna* L. (Lamiaceae) in Thailand

CHARAN LEERATIWONG¹, PRANOM CHANTARANO THAI² & ALAN PATON³

ABSTRACT

The following 10 species in the genus *Premna* (Lamiaceae) are lectotypified: *Premna annulata*, *P. collinsiae*, *P. dubia*, *P. fulva*, *P. garrettii*, *P. paniculata*, *P. quadridentata*, *P. repens*, *P. serrata* and *P. siamensis*. *Premna collinsiae* is reduced to the synonymy of *P. pubescens* and *P. paniculata* is also fully described for the first time following the discovery of complete flowers. Photographs of *P. paniculata* and *P. pubescens* are provided.

KEYWORDS: *Premna*, Lamiaceae, lectotypification, synonymy

Published online: 9 December 2016

The genus *Premna* L. belonging to Lamiaceae was first described by Linnaeus (1771) on the basis of *P. serratifolia* L. It comprises ca 200 species worldwide which are mainly distributed in tropical and subtropical Asia, Africa, Australia and the Pacific Islands (Harley *et al.*, 2004). A preliminary study of this genus in Thailand was undertaken by Leeratiwong *et al.* (2009), enumerating 23 species and 2 varieties.

In preparation of the *Premna* account for the Flora of Thailand, 10 names need lectotypification: *P. annulata*, *P. collinsiae*, *P. dubia*, *P. fulva*, *P. garrettii*, *P. paniculata*, *P. quadridentata*, *P. repens*, *P. serrata* and *P. siamensis*; in addition a new synonym of *P. pubescens* and a complete description of *P. paniculata* are provided.

Premna annulata H.R.Fletcher, Bull. Misc. Inform. Kew 1938: 199 & 421. 1938. Type: Thailand, Phatthalung, Sak, alt. 50 m, 1 May 1930, Kerr 19269 (lectotype BK 257573!, selected here; isolectotypes BM 000950178!, E 00284175!, LL 00375143!, K 001052999!).

Premna fulva Craib, Bull. Misc. Inform. Kew 1911: 442. 1911. Type: Thailand, Chiang Mai, Doi Suthep, alt. ca 700 m, 10 Apr. 1910, Kerr 1085 (lectotype

K 001083321!, selected here; isolectotypes BM 000019563!, K 001083322!, TCD!).

Premna garrettii H.R.Fletcher, Bull. Misc. Inform. Kew 1938: 200. 1938. Type: Thailand, Chiang Rai, Doi Tam Tu Pu, alt. ca 530 m, Garrett 296 (lectotype BKF 080132!, selected here; isolectotypes BM 000950180!, C!, E 00284171!, K 001083329!, K 001083330!, SING!).

Premna paniculata H.R.Fletcher, Bull. Misc. Inform. Kew 1938: 201. 1938. Type: Thailand, Prachuap Khiri Khan (Pak Tawan), alt. ca 20 m, 1 Aug. 1931, Kerr 20536 (lectotype BK 257574!, selected here; isolectotypes BM 000950181!, E 00284177!, LL 00375155!, K!, SING!). Fig. 1.

Shrub to scandent shrub, 1–2 m tall; stem 4-angled to cylindrical with many lenticels, glabrous. Leaves simple, opposite-decussate, elliptic or ovate-elliptic, chartaceous, 2–11 by 1–5 cm, apex acute or acuminate, base cuneate, margins mostly entire or rarely slightly serrate distally; adaxial surface mostly glabrous except with sparse, adpressed, brown pubescent hairs on leaf base and margins; abaxial surface glabrous or sometimes with sparse, adpressed, brown pubescent hairs, with or without sparse brown or yellow peltate glands; secondary veins 4–6-paired;

petiole 2–5 mm long. *Inflorescence* a corymbose thyrsse, 0.7–2 cm long; peduncle 1–3 mm long. *Calyx* campanulate, 2–2.5 mm long, 2-lipped, equally long, with sparsely pubescent hairs, with yellow peltate glands outside, glabrous with peltate glands inside; tube 1.5–2 mm long; posterior lip 3-lobed, lobes triangle-ovate, 0.3–0.6 by 0.3–0.5 mm, apex obtuse or acute; anterior lip 2-lobed, lobes ovate, 0.4–0.8 by 0.4–0.6 mm, apex obtuse or rounded. *Corolla* greenish-white or white, 2-lipped, 3–5 mm long; tube 2–3 mm long, glabrous outside, with moderately, white villous hairs distally inside; posterior lip broadly obovate, 1.2–1.5 by 1.7–2 mm, apex emarginate; anterior lip with middle lobe obovate, 1–1.5 by 1.2–1.5 mm, lateral lobes ovate, 1–1.2 by 1–1.5 mm; lobes glabrous. *Stamens* 4, didynamous, exserted; long filaments 1.2–1.5 mm long; short filaments 1–1.2 mm long; anthers brown, broadly elliptic, 0.2–0.4 mm long, opening by long longitudinal slit. *Ovary* superior, 2-carpellate, 4-locular with 1 ovule per locule, obovoid or subglobose, 0.8–1.2 mm long, glabrous with or without sparse, peltate glands at apex; style 1.3–1.5 mm long; stilar branches 2, 0.1–0.3 mm long. *Fruits* drupaceous, subglobose or obovoid, 4–6 mm long, glabrous with sparse, peltate glands at apex, ripening black; persistent calyx 2–3 mm long. Seeds 1–4, bean-shaped, exaluminous.

Note.—*Premna paniculata* was described by Fletcher (1938), but the description of the species was not complete because of a lack of corolla characters. During fieldwork in Kaeng Krachan National Park in Phetchaburi province between March and April 2016, complete flowers of this species were found and, therefore, a full description is presented here for the first time. The species is endemic to the south-western region of Thailand, especially in Prachuap Khiri Khan and Phetchaburi provinces.

Premna pubescens Blume, Bijdr. Fl. Ned. Ind.: 816. 1826. Type: Indonesia, Java, *Blume s.n.* (holotype **L**).

— *Premna collinsiae* Craib, Bull. Misc. Inform. Kew 1914: 283. 1914, as ‘*collinsae*’. Type: Thailand, Chonburi, Sriracha, 9 Jan. 1913. *Collins* 109 (lectotype **K** 001084805!, selected here; isolectotypes **K** 001084804!, **LL** 00208584!), **synon. nov.**

— *Premna dubia* Craib, Bull. Misc. Inform. Kew 1914: 283. 1914. Type: Thailand, Lampang, alt. 250 m, 30 Apr. 1912, *Kerr* 2562 (lectotype **K** 001083308!,

selected here; isolectotypes **BM** 000950179!, **K** 001083307!, **LL** 00208581!, **P** 00689513!, **TCD**!). Fig. 2.

Notes.—Examination of the type specimens and the descriptions of *Premna collinsiae* and *P. pubescens* reveals them to be conspecific and, therefore, *P. collinsiae* is treated here as a synonym of *P. pubescens*. This species is widespread in India, Bangladesh, Myanmar, Thailand, Laos, Vietnam, the Malay Peninsula, Indonesia and Australia. In Thailand, it can be found in most floristic regions, except in the peninsula.

Premna repens H.R.Fletcher, Bull. Misc. Inform. Kew 1938: 202. 1938. Type: Thailand, Prachuap Khiri Khan, Sam Roi Yot National Park, 12 July 1924, *Kerr* 10950 (lectotype **BK** 257576!, selected here; isolectotypes **BM** 000617361!, **E** 00284230!).

Premna serrata H.R.Fletcher, Bull. Misc. Inform. Kew 1938: 202. 1938. Type: Thailand, Tak, Umphang, Khao Hua Mot, alt. ca 900 m, 12 June 1922, *Kerr* 6122 (lectotype **BK** 257577!, selected here; isotypes **BM** 000617343!, **E** 00284179!).

Premna siamensis H.R.Fletcher, Bull. Misc. Inform. Kew 1938: 203. 1938. Type: Chiang Mai, Pang Tawn, 29 Apr. 1931, *Put* 3810 (lectotype **K** 001067667!, selected here; isotypes **BK** 257572!, **BM** 000617344!, **E** 00284178!, **LL** 00375160!).

Premna trichostoma Miq., Fl. Ned. Ind. 2: 892. 1858. Type: Indonesia, Java, Banjoemas, 1802–1818, *Horsfield* s.n. (holotype **L**, isotypes **BM** 000950197!, **K** 000647000!).

— *Premna quadridentata* H.R. Fletcher, Bull. Misc. Inform. Kew 1938: 201. 1938. Type: Thailand, Trat, Koh Chang, 7 Jan. 1929, *Kerr* 16563 (lectotype **K** 000610344!, selected here; isolectotypes **BK** 257575!, **BM** 000950182!, **E** 00284231!, **LL** 00375158!).

ACKNOWLEDGEMENTS

We would like to thank the Royal Golden Jubilee Program (RGJ: grant No. 4.B.KK/46/B.1) and the Commission on Higher Education, Ministry of Education, Thailand for financial support. We are very grateful to the curators and staff of the following herbaria: AAU, BCU, BK, BKF, BM, E, K, KKU, L, LL, P, PSU, QBG, SING and TCD for providing access to their collections.
